

Elliot Medication Management Clinics

At Our Pharmacy Clinic

An Elliot pharmacist will work with you and your primary care provider to help you manage your medications successfully!

y adding a pharmacist to your healthcare team, you strengthen your ability to reach your treatment goals and reduce the risk of experiencing medication-related problems.

Our pharmacist will look for things like:

drug interactions, side effects, unnecessary medications, potential cost savings, understanding of medications, and how you take your medications. If you have high blood pressure, high cholesterol or diabetes, the pharmacist will work with you to help you meet your therapeutic goals and provide you with education, monitoring and follow-up on any medication changes that are made by your primary care provider.

Interested? Ask your primary care provider for a referral and call 663-7027 to schedule your first appointment. Please, plan to bring all your medications with you to your appointment so that the pharmacist can review all the medications you take on a regular basis.
