ELLIOT HOSPITAL WELCOMES NORTHEAST REHABILITATION HOSPITAL

L to R: James Woodward, President & CEO, Elliot Health System and John Prochilo, CEO, Northeast Rehabilitation Hospital Network

Manchester, NH – The Elliot Hospital has partnered with Northeast Rehabilitation Hospital to create a rehabilitation floor within the Elliot Hospital. Previously, patients in need of acute rehabilitation services had to leave the Elliot Hospital to receive services elsewhere. As of early this month, the seventh floor of the Elliot Hospital is now leased to Northeast Rehabilitation Hospital allowing patients to stay at Elliot and receive the acute rehab services needed to complete their recovery.

“The opening of Northeast Rehab’s inpatient satellite at the Elliot Hospital is the result of many years of dedicated work by both of our institutions. This new initiative brings together the resources of two high quality healthcare organizations who will effectively provide to our patients a seamless continuity of care from the onset of debilitating illness or injury through the entire rehabilitation process,” explained John Prochilo, CEO of Northeast Rehabilitation Hospital Network.

The rehabilitation hospital floor includes 15 newly renovated private patient rooms. The purpose of the acute rehab program is to help patients regain their ability to safely perform the activities of daily living. The goal is to have patients return home at their highest possible level of independence.

Northeast Rehabilitation Hospital offers treatment for:

- Traumatic and non-traumatic brain injury
- CVA, young stroke
- Spinal cord injury
- Multiple trauma with acute medical needs
- Other neurological disorders
- Complicated Joint replacement
- Multiple orthopedic injuries
- Cardiac disorders
- Pulmonary disorders
- Burns
- Lower extremity fractures and multiple fractures
- Amputation
